### Working Prototype Known Problems Report

1. Although we have all five departments, we only finished majors and minors for J Baskin Engineering. All major and minor buttons of other departments will direct the user to JBE major/minor page.
2. The only major with UI updates and the class scroll picker is CS BS.
3. The class scroll picker only contains CSE classes.
4. The loading time of all background pictures and loading time of browser related button heavily depends on the network speed of your device.
5. In the Engagement/Clubs section, only buttons in academic sections are working. If there is no response clicking on buttons in that section, it means that we couldn't find the official website or facebook group for that club.
6. Scroll view on subpage of athletics is not working.
7. Some features might not work on android devices (class scroll picker, UI, fonts, grephink button for study group).
8. Some UI components don't display perfectly for all resolutions and for displays that are not 100% scale.
9. We did not do any testing on tablets (both iOS and Android) so their behavior is unknown but we expect to see a mirror effect to the iPhone and Android mobile phone counterparts.
